
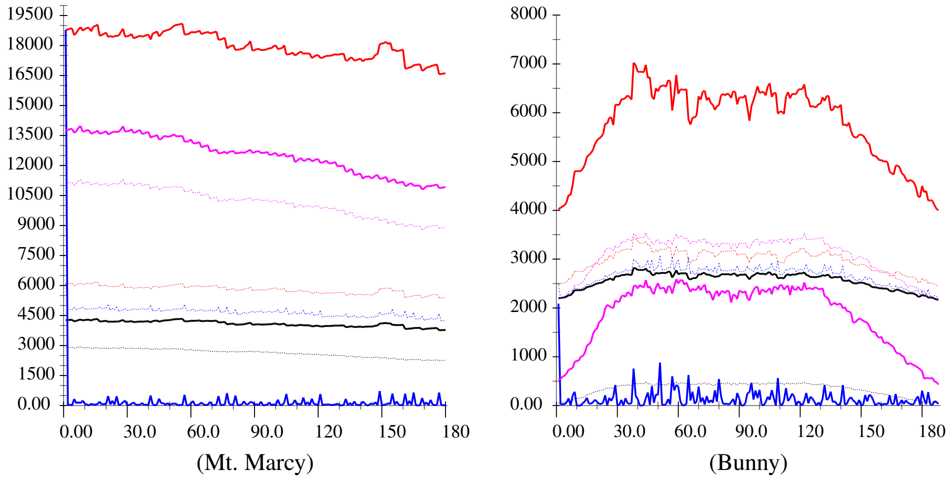
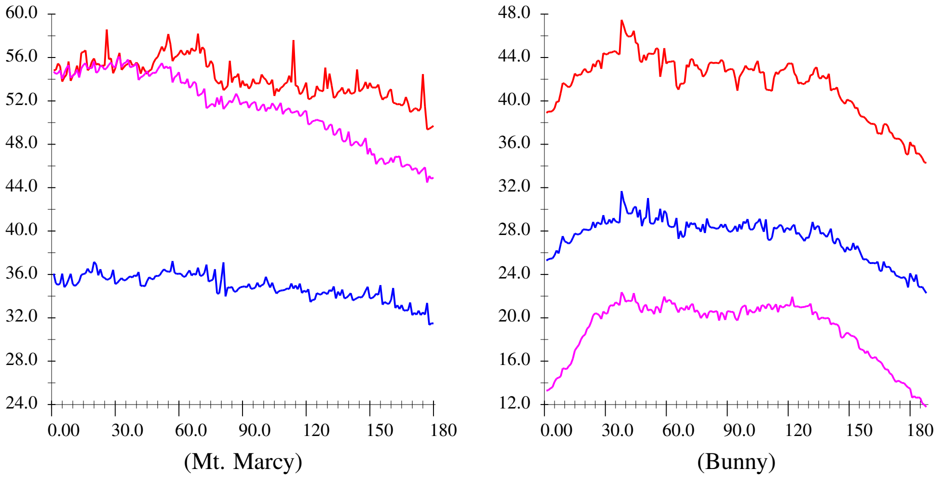
Extracted meshes from the MTs representing Mount Marcy, and from the one representing Bunny.



Statistics for the three extraction algorithms. Black lines represent the number of extracted triangles (plain: global query, dotted: local query); Red, blue, magenta lines refer to algorithm **A**, **B**, and **C**, respectively (plain: number of triangles swept by the cut, dotted: number of triangles tested against the extraction conditions).



Extraction times (in milliseconds). Red, blue and magenta denote algorithm **A**, **B**, and **C**, respectively.
